

Preservative for the FUTURE

Concentrated wood oil from natural conserving agents without unnecessary solvents

Made of modified tall resins, BT Wood® Dark Oil Primer is formulated to enhance and protect the natural beauty of new or weathered timber and wood products. It can be used on any interior or exterior wood surfaces.

BT Wood® oil protects timber against dirt, rot fungi and mould; it also improves moisture stability of wood and lowers moisture content changes. The protective effect is based on the amount of the absorbed oil.

No chemical or biological influencing anti-rot- or anti-mould agents are added into BT Wood® Dark Oil Primer.

Concentrated BT Wood® Dark Oil Primer has high solids content –over 50%– and can be diluted when needed; this is recommended especially when treating new planed timber

Application tips

- Oil is always best absorbed in warm and dry conditions.
- Mix the oil before use.
- For new planed surface- dilute oil with pinene turpentine if necessary. Plenty of oil can be absorbed in wood; nevertheless it does not leave any thick layer on the surface.
- The remaining oil can be wiped away before it dries if needed
- Colour of the surface can get darker by re handling the wood
- Use in well conditioned room.
- Avoid skin contact.

Packing sizes:

- Diluted → 1, 5, 10 and 200 litres
- Oil only → IBC and bulk deliveries

Colour:

- Mahogany
